SUSTAINABILITY ASSESSMENT CONCENTRATION

[COURSE CODE]

Emissions Estimation and Reporting

Put a number on carbon, and prove it.

Quantify, report and verify greenhouse gas emissions to international standards.

WHAT YOU WILL STUDY

- Greenhouse gas (GHG) accounting principles and boundaries
- Direct emissions: combustion, process and fugitive
- Purchased energy and value chain emissions
- Emission factors, data quality and uncertainty
- Project-level reductions and removals
- GHG reporting, verification and validation

YOU WILL BE ABLE TO

1. Compile a GHG inventory for an organization
2. Quantify project emission reductions against a baseline
3. Plan the verification of a GHG statement

ABBREVIATIONS

ISO International Organization for Standardization

GHG Greenhouse gas

AUDIENCE

Chemical Engineering

Mechanical and Energy Engineering

Petroleum Engineering

Civil and Environmental Engineering

Industrial and Systems Engineering

Electrical Engineering (power)

STANDARDS COVERED

ISO 14064, Parts 1 to 3
Greenhouse gas quantification, reporting, validation and verification

ISO 14065
Requirements for validation and verification bodies

GHG Protocol
Corporate accounting and reporting standards

PROFESSIONAL PATHWAY

Builds the skills of a GHG inventory quantifier and verifier.
