UNDERGRADUATE ENGINEERING CONCENTRATION · [DEPARTMENT / COLLEGE]

Sustainability Assessment

Want a career in sustainability? Four courses turn it into skills employers can check, each built on international standards and tied to a professional credential.

COURSE 1

Environmental Management and Assessment

Be the engineer who keeps projects compliant.

Environmental management systems to ISO 14001 and environmental impact assessment to Saudi requirements.

Leads to: ISO 14001 internal and lead auditor training

COURSE 2 · ARE 460

Green and Sustainable Buildings

Design buildings that use less and earn a green rating.

Design and rating of buildings with LEED and Mostadam.

Leads to: LEED Green Associate examination

COURSE 3

Emissions Estimation and Reporting

Put a number on carbon, and prove it.

Greenhouse gas inventories, reporting and verification to ISO 14064 and the GHG Protocol.

Leads to: GHG inventory quantifier and verifier roles

COURSE 4

Circularity and Life Cycle Assessment

See the whole life of a product, then redesign it.

Life cycle assessment, product carbon footprints and circular economy to ISO standards.

Leads to: LCA practitioner and carbon footprint analyst roles

AUDIENCE

Industrial and Systems Engineering; Smart Cities; Civil and Environmental Engineering; Architectural Engineering and Construction Management; Chemical Engineering; Mechanical Engineering; Petroleum Engineering; Electrical Engineering; Materials Science and Engineering.

WHAT YOU GAIN

- Working knowledge of the standards employers audit against
- A team project in every course
- Preparation for four professional credentials

ABBREVIATIONS

ISO International Organization for Standardization
GHG Greenhouse gas
LEED Leadership in Energy and Environmental Design
LCA Life cycle assessment
